Chrysoprase Ayita

Software Engineer

email · phone · github · portfolio

Summary

Software engineer experienced in full-stack application development, business dashboards, e-commerce, and AI-powered applications. Skilled in JavaScript, Python and C++, with a focus on AI engineering, automating workflows, and solving practical business problems.

Experience

Freelance Software Developer — Remote · 2021–Present

- Built a React and Firebase dashboard for a Dubai-based home electrical and electronics company, digitizing supply-chain management and project tracking.
- Co-developed a React and Django e-commerce platform with Stripe payment integration.
- Delivered a SolidJS production monitoring dashboard for a dry-fruit processing company, tracking employee output against daily targets across work rounds.

Selected Projects

Newhorizn — Next.js, Supabase, Paystack

- Launched a student accommodation discovery and booking platform with authentication, payment webhooks and client-side fallback, and a booking engine that prevents date clashes and enforces a host-configurable one-day buffer.

Dome — Next.js, Supabase

- Created an academic management platform with role-specific dashboards, timetable generation with conflict prevention, and course-material management for lecturers and enrolled students.

GTM-Copilot — Next.js, SQLite

- Built an AI go-to-market copilot that evaluates products using structured inputs, including development stage and existing user base, and recommends user-acquisition experiments.
- Designed a multi-stage intelligence workflow that incorporates previous experiments and accumulated learnings to inform subsequent recommendations.

Flaura — Next.js, Turborepo, Convex

- Engineered a payment disbursement platform integrating the Moolre Payments API, supporting individual and batch settlements, reusable recipient groups, and an orchestration layer for account verification and API retries.

SumurAI — Open-source LLMs, OpenRouter

- Integrated open-source LLMs into an AI chatbot through the OpenRouter API.

Education

BSc Computer Science — Ghana Communication Technology University (GCTU) · 2022–2025

Technical Skills

- **Languages:** JavaScript, Python, C++
- **Frontend & Backend:** React, Next.js, SolidJS, Astro, Node.js, Express.js, NestJS, Django
- **Databases:** SQL, Firebase, Supabase, Convex, SQLite
- **Machine Learning:** pandas, scikit-learn, PyTorch, TensorFlow, Keras; random forests, neural networks; data preprocessing, feature engineering, model training and evaluation
- **AI & Tools:** Hugging Face, OpenRouter, Langchain, Git, Docker, Turborepo
- **Integrations:** Stripe, Paystack, Moolre Payments API
